Answer

the

question.

What are lichens considered?

- a. pioneer species
- b. taiga
- c. animals
- d. aquatic

Lichens are made up of what two living things?

Eukaryotes that have cell walls, are heterotrophic, feed by absorbing food, and use spores to reproduce are _____.

- a. lichen
- b. fungi
- c. algae
- d. mitochondria

Lichen is a combination of what two organisms?

- a. algae and bacteria
- b. bacteria and fungi
- c. fungi and algae
- d. fungi and protist

What is the mutualistic relationship that exists in a lichen?

Using few words; terse; concise

- a. laconic
- b. lichen
- c. jovial
- d. metaphor

Which is the closest group to Basidiomycota?

- a. chytrids
- b. Ascomycota
- c. Zygomycota
- d. lichens

Which factor does NOT help to break rocks into soil during primary succession?

- a. lichen
- b. trees
- c. water
- d. wind

Before green algae were reclassified as plants, they were classified as _____.

- a. bacteria
- b. fungi

- c. Protista
- d. lichens

How do lichens obtain their energy?

- a. through photosynthesis
- b. by decaying organic matter
- c. from parasitizing other plants
- d. from minerals in the soil

Algae and fungi can cooperatively live together to form this variant of protists.

- a. sporozoan
- b. moss
- c. mildew
- d. lichen

Eukaryotes that have cell walls, are heterotrophic, feed by absorbing food, and use spores to reproduce are _____.

- a. fungi
- b. animals
- c. plants
- d. lichen

A symbiotic relationship between a fungus and green algae or cyanobacteria is a

- a. fruiting body.
- b. lichen.
- c. mushroom.
- d. mycorrhizae.

Lichens absorb water and air through their roots.

- a. True
- b. False

Select the two types of organisms that make up lichen.

- a. fungi
- b. bacteria
- c. algae
- d. mugwort

If an erupting volcano kills all the nearby plants, what will the first living organisms to establish themselves probably be?

- a. lichens and mosses
- b. algae and water lilies
- c. grasses
- d. insects

A lichen is a mutualistic relationship between cup fungi and green algae or cyanobacteria.

An example of _____ is lichens and mosses growing on bare rock after a volcanic eruption.

- a. competition
- b. population
- c. primary succession
- d. secondary succession

Erosion can be from a glacier, moving water, and (gravity/lichens) *gravity*.

Which conjunction best completes the sentence below?

Lichen spreads on the tree _____ does not kill it.

- a. and
- b. or
- c. but
- d. so

Quyidagi savollarga javob bering.

1.Lishayniklar qanday organizmlardan va nimalardan tashkil topgan hamda kim ularni aniqlagan?

2.Lishayniklarning vegetativ tanalari va ranglari qanday kattaliklarda?

3.Morfologik tuzulishlaridan qanday ko`rinishlarda bo`ladi?

4.Lishayniklarning ichki tuzilishlarida qanday farqlar bor va u nima deb ataladi?

5.Lishayniklar qanday ko`payadi?
